DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1, 3, 7, 8, 10-13, 16 and 21-25 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. In particular, independent claims 1 and 25 recite, "the pipe element having a present bending angle α which is always less than 140° "; however, the original disclosure of the instant application fails to support the amended claims 1 and 25, filed 2/2/2005, that the Applicant had possession of the amended claimed invention.

Response to Arguments

Applicant's arguments filed 7/14/2005 have been fully considered but they are not persuasive. The Applicant argues:

On the contrary, by way of example, the Examiner's attention is referred to the last paragraph of page 2 in which a plurality of bending angles are referred to and emphasis is made that the structure of the pipe element in accordance with the invention allows for large bending angles extending up to a maximal possible bending angle in which the undulations abut against each other.

Taken together, the above disclosure provides clear support for a range of bending angles in accordance with the

invention, extending from values of $\alpha = 180$ degrees down to values below $\alpha = 90$ degrees. The restriction of α less than 140 degrees is therefore nothing else than a disclaimer of the range of α between 180 degrees and 140 degrees. This restricted range was necessitated by prior art, unknown to the Applicant at the time of Invention. By restricting the α values to below 140 degrees the Applicant has not entered new matter but has merely avoided overlap with the disclosure of prior art.

The Examiner disagrees. The Applicant admits in his arguments that he did not have possession of the claimed invention, by stating, "This restricted range was necessitated by the prior art". Therefore, the Examiner must conclude that the claim contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor, at the time the application was filed, had possession of the claimed invention.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
